

## Job Description for Senior Linux Administrator

**Position:** Senior Linux Administrator

**Based in:** Mumbai

**Reporting to:** CTO

**Experience required:** Someone with 4 to 6 years of work experience

**What do you need to do?** (Role and Responsibilities)

Responsible for managing all our websites and server in-house operations.

This will involve:

- Monitoring all our servers and processes – e.g. server uptime, backups completed.
- Troubleshooting problems that arise on the site, and taking proactive action on them. This includes apache / mysql / postgres / RoR problems/ MongoDB Replication and coordinating with the development teams to resolve them.
- Be part of our build process – deploy apps, take backups of old db and app.
- Basic management of Amazon EC2 services – managing instances, starting/stopping, monitoring costs.
- Handle internal LAN / Active Directory / Squid configuration requirements.
- Create and update all documentation, accurately and relevantly.
- Ensuring fixes are implemented in appropriate time-frames.
- Knowledge of SVN server.
- Monitoring on nagios server.
- Knowledge of Shell Scripting.

**Who could you be? Background and Experience:**

- At least 4 to 5 years experience as a system administrator with 1 to 1.5years of cloud computing experience.

- The ideal candidate would have past experience administering servers of a popular dot-com, for both Windows and Linux servers. Exposure to database maintenance scripting (Slony, Mysql), Linux shell scripting and Amazon cloud management is a bonus.
- Team player, good learner, problem solver, good communication skills.

**Educational Qualification:**

- B.E./B.Tech or Science graduate. Certifications preferred.
